Demographic Profile (No Base, Population Weighted)

**Median Household Income:** The median household income of the target (and base if provided)

The median household income of individuals who watched the 2017 Super Bowl at home is $88,445.

**Median Age:** The median age of the target (and base if provided)

The median age of individuals who watched the 2017 Super Bowl at home is 51 (rounded down from 51.4 years).

**Vertical % (Percents on General Statistics, Bar, Column and Pie Charts):** The percent of the target that meets the demographic criteria

Of adults 18+ who watched the 2017 Super Bowl at home, 61% are married.

Of adults 18+ who watched the 2017 Super Bowl at home, 37% graduated college or more.

Of adults 18+ who watched the 2017 Super Bowl at home, 10% are Hispanic.
Segmentation (Pie Chart)
(No Base, Population Weighted)

**Pie Chart Vertical %:** The percent of the target that falls into that specific segment

*Of adults who watched the 2017 Super Bowl at home, 24% of them are considered Image Shapers.*
Segmentation (Bar Chart) (No Base, Population Weighted)

**Bar Chart Index:** The likelihood of the target to fall into the specific segment

*Adults who watched the 2017 Super Bowl at home are 20% more likely to be Invincibles than all adults.*

*Adults who watched the 2017 Super Bowl at home are 27% less likely to be Image Shapers than all adults.*
Time Spent Composition: Last 7 Days by percent (No Base, Population Weighted)

**Percent of Stacked Bar:** Percentage of the target that used the corresponding device for the time interval indicated (only includes users of that device)

Among Male 21-49 digital tablet users, 20% have spent 1-4 hours on their digital tablet in the last 7 days.

**Average Weekly Time Spent:** Amount of hours and minutes spent in a given week on the specified device

In an average week, Male 21-49 digital tablet users are spending 6 hours and 50 minutes on their digital tablet.
Time Spent Composition: Last 7 Days by Index (No Base, Population Weighted)

**Index of Stacked Bar:** The likelihood of the target that used the corresponding device for the time interval indicated (only includes users of that device) relative to the base, for the time frame specified.

*Males 21-49 are 17% more likely than the average adult to have spent under 1 hour on their tablet in the last 7 days.*
Reach by Percent: 1 Day, 7 Days, and 30 days (No Base, Population Weighted- Example for 1 day)

**Column Chart Percent**: Percentage of the target who used the corresponding device in the specified time frame

80% of Males 21-49 have used a mobile phone on an average day [average week for 7 days and average month for 30 days].
Reach by Index: 1 Day, 7 Days, 30 Days (No Base, Population Weighted- Example for 1 Day)

**Column Chart Index:** The likelihood of the target to use the corresponding device relative to the base, for the time frame specified

*Males 21-49 are 32% more likely to use a PC at Work on an average day (average week for 7-days, average month for 30-days) than all adults.*

*Males 21-49 are 3% less likely to listen to the radio on an average day than all adults.*

![Column Chart Index](chart.png)
Incremental Reach Across Platforms (No Base, Population Weighted)

Vertical %: Percent of the target reached by the corresponding media channel within an average week

Horizontal Axis: Average time spent in hours with the corresponding media channel in an average week, among users of that medium

Incremental Reach: Incremental reach gained when adding a media channel to the mix; this is the total reach of the channel minus the channel(s) before it

Total Reach: This is calculated by “OR”ing the media channel specified with the combination of those above it

97% of Starbucks customers have used their TV in an average week.

1.5% of Starbucks customers have used streaming media and did not use their TV (unduplicated reach gained when streaming media is added to TV).

[Alternative way to read unduplicated reach] There is an additional unduplicated reach opportunity of 0.63% of Starbucks customers that have used newspaper beyond TV and streaming media.
Digital Activity Profile
(No Base, Population Weighted)

**Internet Location Accessed Most Often (by Index):** The likelihood of the target to access the internet at the corresponding location most often relative to the base

*Starbucks customers are 58% more likely to access the Internet most often at restaurants than all adults.*

**Internet at Home –Usage Access (by Index):** The likelihood of the target to access the internet at home via the specified device relative to the base

*Starbucks customers are 19% more likely than all adults to access Internet at home using their cell phone or tablet.*

**Mobile Segment Composition (by Vertical %):** Percent of the target which falls into each segment

*31% of Starbucks customers are Social Connectors.*

**Smartphone Activity Index:** The likelihood of the target to participate in the specified smartphone activity in relation to the base, among those that used their smartphone for any of the specified activities in the last 7 days

*Starbucks customers are 6% more likely than the average smartphone user to have used IM/Chat in the last 7 days.*

*Starbucks customers are 11% less likely than the average smartphone user to have used email in the last 7 days.*
Media Activity Across Platforms by Percent (Base, Population Weighted)

**Column Chart Percent:** Percentage of the target who have done the corresponding activity in any device in the last 7 days

*77% of Starbucks social media users accessed social media on their smartphone device in the last 7 days*
Index Column Chart: The likelihood of the target to perform the selected activity on the corresponding device relative to the base, among users that have participated in the selected activity on any measured device

Among adults that have visited social media on any device, Starbucks customers are 37% more likely to have visited social media on their PC at Work than the average adult that has visited social media in the last 7 days.

Among adults that have visited social media on any device in the last 7 days, Starbucks customers are 26% less likely to have visited social media on their game console than the average adult that has visited a social media in the last 7 days.
Media Platforms Across Activities by Percent (Base, Population Weighted)

**Column Chart Percent:** Percentage of the target who have done any activity on the corresponding device in the last 7 days

77% of Starbucks smartphone users have accessed social media on their smartphone device in the last 7 days
Media Platforms Across Activities by Index (Base, Population Weighted)

**Index Column Chart:** The likelihood of the target to have used a selected platform to perform any activity relative to the base, among users that have participated in any activity on the selected device.

*Among adults that have done any activity on their smartphone, Starbucks customers are 12% more likely to have used GPS on their smartphone than the average adult in the last 7 days.*

*Among adults that have done any activity on their smartphone, Starbucks are 11% less likely to have used email on their smartphone than the average adult in the last 7 days.*
Simultaneous Usage: While Watching TV by Percent (No Base, Population Weighted)

**Horizontal Bar Chart:** The percent of the target who participates in the specified activity at the selected frequency while watching TV

*11% of Starbucks customers talk often on their mobile phone while watching TV.*
Simultaneous Usage: While Watching TV by Index (No Base, Population Weighted)

**Index Bar Chart:** The likelihood of the target to have participated in the specified activity relative to the base.

*Starbucks customers are 29% more likely than the average adult to very often talk on their mobile phone while watching TV.*
Digital Day in the Life by Percent
(No Base, Population Weighted- Example for Smartphone Day in the Life)

**Horizontal Stacked Chart Percent:** Percentage of the target who used the corresponding device, among those that used their smartphone for any of the specified activities during the time frame specified

27% of full-time employed adults who are smartphone users talked on their smartphone between 11AM and 12PM during the week. (During the weekdays: Monday-Friday; During the weekends: Saturday-Sunday; During any specific day)

**Notes:**
The Smartphone Day in the Life, Smartphone User base is defined as satisfying 1+ of the following criteria for **smartphone** operating system used: Android, iOS, Blackberry or Other

The Mobile Day in the Life, Mobile User base is defined as is defined as satisfying 1+ of the following criteria for **smartphone/tablet** operating system used: Android, iOS, Blackberry or Other

Source: Simmons Research LLC, Winter 2018 Simmons Connect
Digital Day in the Life by Index
(No Base, Population Weighted- Example for Smartphone Day in the Life)

**Horizontal Stacked Chart Index:** The likelihood of the target to use the corresponding device in relation to the base, among those that use their smartphone for any specified activities during the time frame specified

Full-time employed adults are 7% more likely than all smartphone users to listen to music on their smartphone between 8-9AM during the week. (During the weekdays: Monday-Friday; During the weekends: Saturday-Sunday; During any specific day; Monday, Tuesday, etc.)

Hispanics are 4% less likely than all smartphone users to talk on their smartphone between 2-3PM during the week. (During the weekdays: Monday-Friday; During the weekends: Saturday-Sunday; During any specific day; Monday, Tuesday, etc.)

**Notes:**
The **Smartphone** Day in the Life, Smartphone User base is defined as satisfying 1+ of the following criteria for **smartphone** operating system used: Android, iOS, Blackberry or Other

The **Mobile** Day in the Life, Mobile User base is defined as is defined as satisfying 1+ of the following criteria for **smartphone/tablet** operating system used: Android, iOS, Blackberry or Other

Social Media Activity Profile by Percent
(No Base, Population Weighted)

**Social Media User (by Percent):** Percent of the target defined as a social media user
Respondents must satisfy the following criteria:
Visited Social Media/Networking Websites? Yes

**61% of Hispanics are Social Media Users**

**Social Media Statements –Any Agree (by Percent):** Percent of the target that agrees with the specific statement

**34% of Hispanics agree with the following statement, “I talk about things I see on social sharing/networking websites in face-to-face conversations.”**

**Social Media Website Visits (by Percent):** Among those who indicated a frequency of visitations, the percent of the target that visited a social media website at the specified frequency

**58% of Hispanics visited social media websites 3+ times a day.**

**Top Social Media Websites (by Percent):** Percent of the target that has visited a specified social media website in the last 7 days
Websites visited from home PCs shown are the top 5 social media websites measured in Simmons Connect (websites with samples sizes of 60 or below are omitted)

**34% of Hispanics have visited Facebook.com in the last 7 days.**

**Social Media Consumption by Device (by Percent):** Percent of the target that has accessed social media on a specific digital device in the last 7 days, among those that have accessed any digital device for social media

**76% of Hispanics used their smartphone to access social media in the last 7 days.**
Social Media Activity Profile by Index (No Base, Population Weighted)

Social Media Statements – Any Agree (by Index): The likelihood of the target to agree with the specified social media statement relative to the base.

Hispanics are 25% more likely than all adults to agree with the following statement, “I am more likely to watch a TV show or TV network that actively participates on social media/networking websites.”

Social Media Website Visits (by Index): The likelihood of the target to visit a social media website in the specified frequency, relative to the base.

Hispanics are 9% more likely to visit social media websites 3+ times a day than all adults.

Hispanics are 21% less likely to visit social media websites 1-3 times a week than all adults.

Top Social Media Websites (by Index): The likelihood of the target to visit a specified social media website among those that visit social media sites often.

Websites visited from home PCs shown are top 5 social media websites measured in Simmons Connect (websites with samples sizes of 60 or below are omitted).

Females are 19% less likely than the average adult to have visited hangouts.google.com in the last 7 days.

Social Media Consumption by Device (by Index): The likelihood of the target to have accessed social media in relation to the base, among those that used any digital device for social media in the last 7 days.

Hispanics are 13% less likely to access social media on their PC at work than all adults that have used any device for social media.

Hispanics are 20% more likely to access social media on their streaming media device than all adults that have used any device for social media.
Channel Category by Percentage: 7 Days and 30 Days (No Base, Population Weighted- Example for 7 Days)

**Horizontal Bar Chart:** Percentage of the target who visited the corresponding category by device in the specified time frame

52% of Hispanics have visited the Computers and Internet category on their mobile device (smartphone/tablets) in the last 7 days.

**Table Chart by Percent:** Percentage of the target who visited the corresponding website by device in the specified time frame

39% of Hispanics have visited Google.com on their mobile device in the last 7 days.

**Table Chart by Index:** The likelihood of the target to have visited the corresponding website, relative to the base

Hispanics are 24% less likely than the average adult to have visited Facebook.com on their mobile device (smartphone/tablets) in the last 7 days.
